9. Fail to push

```
student@huas-VirtualBox:~/Bob/Repository2$ git remote add github https://github.com/zoearendsz/Repository2.git
student@huas-VirtualBox:~/Bob/Repository2$ git push github master
Username for 'https://github.com': zoearendsz2
Password for 'https://zoearendsz2@github.com':
To https://github.com/zoearendsz/Repository2.git
 ! [rejected]        master -> master (fetch first)
error: failed to push some refs to 'https://github.com/zoearendsz/Repository2.git'
hint: Updates were rejected because the remote contains work that you do
hint: not have locally. This is usually caused by another repository pushing
hint: to the same ref. You may want to first integrate the remote changes
hint: (e.g., 'git pull ...') before pushing again.
hint: See the 'Note about fast-forwards' in 'git push --help' for details.

12. Last commits

When you do `git log`, the last commits displays and shows a log of what Alice and Bob committed last on their own account. It doesn't display each other commits for each other.

13.

When I do `gitk`, it opens a window where I can see the branches, the file and the commits of both Alice and Bob.

12.

Can you confirm that the last commit is equal to the one on github?

No, as mentioned above. When I do 'Git Log' on Alice and Bob, it shows the log for that specific user and not all of the logs.
